

RSI Calls For Additional Safety Measures

February 12, 2014 – The Railway Supply Institute Committee on Tank Cars (RSICTC) has called on the U.S. Department of Transportation (DOT) to consider several new safety measures for tank cars carrying crude oil and ethanol. In a letter to DOT Secretary Anthony R. Foxx, RSICTC proposed additional safety requirements on newly manufactured railway tank cars, a prohibition on placing additional legacy tank cars into crude oil and ethanol service and prioritization of the modification of existing legacy crude oil and ethanol tank cars.
